15 Star Trek

Due out at the end of this year, *Star Trek* promises graphics the like of which you've never seen before. Going where no magazine has gone before, we take a look at a development version of the game.

◀ SOFTWARE

19 PC Freeware

The PC compatibles may be cheap these days, and software may be coming down in price, but much of it

is still very expensive. Why not consider public domain programs, free of charge (or an initial registration fee)? Marcus Rowland looks at the best of what's available.

HARDWARE ▶

The Euramax Joystick

22 Disciple

The ultimate interface for the Spectrum? Connect everything you've ever wanted to – and probably more – with Rowland's Disciple.

22 Joysticks

Two more from Euramax go for the

Popular test-trash, including the rather strange-looking Joystick.

23 Omnireader

Ever wished your computer could read print-outs, without the bother of retyping on-screen? The Omnireader provides a step in this direction.

◀ PROGRAMMING

24 Amstrad PCWs

Keep your names and addresses tidy with this card index database.

25 QL

It takes All-Sorts – sorting routines for your QL.

26 Commodore 64

Testing your joystick – plus advice on joystick port programming.

26 Spectrum

All the precision and tension of Championship Bowls.

28 BBC

Counting the pennies with D Laser's spreadsheet.

31 Bytes and Pieces

33 Peek and Poke

REGULARS ▶

4 News Desk

Telecomsoft chief Ed Williams talks about the future of Beyond.

11 Letters, Puzzle

35 Soundcheck

Mark Jenkins looks at a new music package for the Atari 8-bit series from 2-Bit Systems, plus news from Steinberg of a new ST composer.

36 Communications

44 New Releases

Includes this week's charts.

Please to submit articles. Articles which are submitted for publication should not be more than 2000 words long. The articles, and any accompanying programs, should be original. It is the policy of the magazine to accept no responsibility for loss of copyright in any programs sent to other magazines and submitted here – so please do not be tempted. We cannot guarantee to return your programs – so please do not send your only copy. Magazine Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Amstrad: a Yen to raise prices

More money for value...

AMSTRAD has celebrated its 300,000th PC order with a price increase averaging 12 per cent on the range. The new prices range from £329 for the monochrome single floppy machine to £1,299 for the colour machine with 20Mb hard disc.

The price rises technically don't come into effect until January, but as orders placed now won't be delivered until after that it's unlikely that anybody ordering now will be able to get a machine at the old price.

Amstrad puts the price rises partially down to the strength of the Yen, which

has forced the cost of its Japanese components up by 20 per cent. Prices of the other Amstrad machines have not been increased, however. A spokesman suggested that this was because the components were different.

Japanese sourced components are, however, unlikely to make up much of the total production cost of the machines, as Amstrad manufactures in Korea and uses components from a variety of countries in all its machines. The main Japanese input in the PC will, therefore, be the more complex of the chips,

and possibly some disc drives. The lower tech circuitry and raw materials will generally come from countries like Taiwan, Korea and Malaysia.

Demand was, however, another factor in the decision to raise prices. Advance orders have already exceeded

Amstrad's predictions for this year, but have been more heavily loaded towards the hard disc machines than the company expected, and have almost certainly harmed sales of the PCs. The price rise, therefore, has the effect of taking some of the heat off the PCs.

Apple's new UK show

A couple of weeks ago *WTOG*, in a preview of Apple's new *IGS*, that the UK company was lacking in initiative compared to the American parent.

It takes it back. The change of heart has been brought about by the AppleWorld exhibition and

conference in London last week.

There was none of the claustrophobia or rugby scrums usually associated with computer fairs. Instead, as you'd expect from Apple, the show was cool and very stylish.

Star of the show was the *IGS* running some very impressive sound and graphics demos.

But the bulk of the exhibition were supporting the Mac. Arranged in four sections covering education, business, communications and desktop publishing, the show saw the launch of a couple of new products.

First was Microsoft Works,

an integrated software package in direct competition with Lotus's *Jazz*, offering word processor, spreadsheet, graphics, database and communications for £250.

The second launch was of *Atkinson's* first Mac product, a version of *Office* (no price yet).

Other interesting stuff included add-on screens giving 1024 x 1024 resolution, colour laser printers, and the ultimate computer printer, a Linotype 100, giving a resolution of more than 1,000 dots per inch.

Not the kind of stuff that most of us can afford, but we can dream, can't we?

Peter Warwick

Atari repays development grant

ATARI has repaid grants worth £24 million to the Irish Industrial Development Agency after its failure to complete work on a computer factory in Limerick. The factory was originally planned when Atari was owned by Warner Brothers.

Work was abandoned on the factory following Jack Tramiel's takeover two years ago. Atari currently produces most of its games in Taiwan, although Tramiel has in the past expressed his intention to manufacture in the US.

Dedicated games

QDS Software is getting into the hardware market, and is to sell a range of hand-held and table-top games machines from Systems. The range includes dedicated chess and bridge machines, and also extends to draughts, backgammon, Reversi and Four-in-a-Line. Prices start at £19.95 and go up to £199.95 for the Turboaster chess machine.

Due to the Popular printer copying out at the last minute, the last 13 lines of Ken Smith's Miss program were omitted when it was published.

So, here they are below. Also, you can still obtain a copy of the game direct from Ken.

Trouble for Tandy's PC

TANDY'S new on-price PC, the 1000EX, has run into compatibility problems. The machine does run most industry standard applications programs, but its aptitude in the games market is not so clear cut, and embarrassingly for Tandy it won't run one of the games Tandy intends to sell alongside it.

The problem with the game, Master, seems to relate to the Tandy's non-standard keyboard. Master will load into the machine, which is probably why it got through Tandy's checking procedure, but as you can't use the cursor keys you can't get past the second screen.

Other games are similarly difficult. Sublogic's Jet does work, after some investiga-

tion, but instead of the throttle controls being the plus and minus keys as normal they're cursor right and cursor down. Microprose's F-15 Strike Eagle has a nasty problem with the toggle between front and rear view (once you've done it once it keeps doing it while Boulder Dash and Boulder Dash II again have cursor problems.

Some of these games will be playable with a joystick, as unlike the Amstrad PC the Tandy has a PC standard joystick port, and therefore even if the keyboard won't work the joystick should.

Tandy is meanwhile supplying Activision with a 1000EX, in an attempt to identify the problem with Master.

The Tandy 1000EX

British games tilt at French awards

BRITISH software has been winning European awards recently - Palace Software's *Cauldron Fire* took the 8th award for the best game of the year. He is the leading French games magazine, and its readers are obviously *Cauldron Fire* fans: last year the accolade for the best computer arcade-adventure award to *Cauldron I*.

Golden Goddess's May of the Tiger also won one of the 5th awards for the best Amstrad game of the year, so did US company Microprose's *Stunt Driver*, available in the UK through US Gold.

It also awarded a 'Golden Star' to Anne Steele's *Pawn*, the highly acclaimed graphics adventure published by Rainbird, for the quality of its graphics. The *Pawn* has also gained adventure awards from the German magazines *Happy Computer*, and *64'er*.

Software Hotlines

English Software, well-known mainly as a company still producing titles specifically for the Amstrad line, turns its attention to the Amstrad CPCs and the ST for its next two releases.

0-868, for the ST, may sound like a Snooker game, but not if you talk to English boss Philip Morris: "Well, no, it's not exactly Pool or Snooker, but you'll have all the balls on screen - they'll all move independently - and you'll be able to view it from any angle."

Made of that what you will - a cross between Pool and a Heron's Cradle - and watch this space for further clarification.

On the Amstrad CPCs English is converting *Flash-Slide*, the racing game with a somewhat surreal touch. It should be out in a week or so at £8.95 (tape), £14.95 (disc). Also, Popular will be running an *Flash-Slide* competition next week to keep your eyes peeled.

MicroGen's latest, *Cop-Out*, a shoot-'em-up, gets a thorough play test at the final of MicroGen's National Computer Games Championship, being held this week at the Rayco Hall in London.

More championships from GDS, the publisher of *Cotton Chess*, which is sponsoring a Chess competition under the auspices of the British Chess Federation, Junior Division, and BBC's Chess service. Contestants are being

ing joined through secondary schools.

The big surprise about Amstrad's *Zepto*, a fast action shoot-'em-up that any computer ever advertised a slow action shoot-'em-up is that it's got nothing to do with Hampshire Jeff Master. Coming out next month, a mainly comprises blasting everything in sight to bits in a state of suppressed panic.

It is now a well known fact that Geoff Cransfield's *Seraph* (to be released on BBC II and Commodore \$4 very soon - full review within these pages, next week) has five million levels (OK, then - 10,000) and each can only be accessed via a secret eight figure code. Now, Geoff (it is still) has developed some clever system for encrypting these codes, so the only way into the various levels will be by playing the thing from level zero, and considering it took me a weekend to get to level 253, this is no pushover.

Hacking into the program will be useless, says a *Firebird* spokesperson, because even if someone gets through, there are a totally false set of numbers, just to put you off! With the *Seraph* code ever be broken? *Firebird* claims otherwise: "No way," it says. Not I give it three weeks, max.

Seraph

Beyond is brought from the cold

BEYOND'S career as a separate entity is now over, according to BT Telecommunications head Mary Williams. In the past few months it has lost publisher Francis Lee and marketing manager Marc Pearson, and rather than replace these two Williams has taken the opportunity to merge it more closely into BT's mid-range operation, which now consists of Fordist Gold, Odin and Beyond.

These three will now be run as separate labels by a more

centralised production team, with the different labels being used to differentiate between different kinds of software, and Beyond in particular concentrating on "quest adventures and licensing deals." Significantly Williams refers to these as the label's existing specialisations, although Star Trek is actually only the second such deal Beyond has been involved in. The first was last year's disastrous *Superman* game.

Williams feels that more

"We've orders to return to Federation territory captain."

centralisation will be good for the BT labels, making them more flexible and easier to run. "In this business it's a no longer safe for a small unit, even within a big one."

The merger should go some way to decrease friction within Telecommunications,

where staff have spoken of resentment at the way the label sometimes seemed to be run. Williams says that the reorganisation had been talked about before the departure of Lee and Pearson, but confirms that their leaving also had an influence.

UK denies piracy claim

UK Software, which last week was at the centre of two separate piracy claims, has laid the blame at the door of the programmer in both cases, for Sinclair of UK accepts that its *Cinemascope* line is similar to Mastertronic's *Spellbound*, but says that he released the game without being aware of this.

"We hadn't seen *Spellbound* until Mastertronic contacted us, but within half an hour we'd withdrawn it from sale." Copies of the game are now being destroyed as they come back to UK. "Any software house in the country is open to things like this," says Sinclair. "I just worry about how much of it can go on."

Mastertronic itself is now pursuing the matter with the programmer, who has been given the option of admitting guilt or being sued. "I'd like it to be known as any software house not to go near the guy," says Alison Barclay of Mastertronic.

The second clash, between UK and Audiogenic, seems to be more complex. Audiogenic's *The Cast of the Free* and UK's *Quest for Freedom* are

very similar, and were written by the same author, but Sinclair claims UK had the programme first. "We played first £300 for exclusive rights early in 1988, and we made it clear that we would not release it until Christmas."

The programmer seems to have agreed with both UK and Audiogenic, but Sinclair insists that he signed with UK first. Another software house has as yet seen the other's product, but it seems unlikely that the matter will go any further. "I'm prepared at this stage to accept that Audiogenic published it in good faith," says Sinclair.

Commodore predicts profit

COMMODORE received a little further back from the prediction last week, appearing now credit terms and predicting that it would show a profit for the second successive quarters.

The new agreement gives Commodore a worldwide credit limit of £140 million, slightly up from the previous figure of £125 million, and is due to be signed later this month. The results for the quarter ended September 30 are due for announcement later this year.

Budget PC software producer aims for the big time

US mid-price software producer *Migret International* is set to move into the European market with one of the best bargains ever to be offered in the PC sector. The company is selling *Ability*, one of the most highly regarded integrated packages in the US, at an introductory price of £69.95 (a normally £89.95) and is offering free training for dealers in the use of the package.

According to Migret managing director Chuck Hamilton the aim of this is to ensure that practically every dealer in the country knows how to use the package, and to take Migret up into the big league alongside Ashton-Tate and Lotus.

Migret certainly has a lot more experience on board than the average newcomer. Company chairman is ex-Lotus and Ashton-Tate, while president David Patrick is ex-Ashton-Tate and development head C. Wayne Parfitt wrote *Office II* and *Office III*.

In addition to *Ability*, Migret will shortly be launching *Fin-Jack*, a database management system, for £129.95, and will be bringing other items from its US range into the UK next

year. The most interesting of these isn't software at all -

Hamilton: Free training

the company produces a pocket modem that is five inches long and supports baud rates from 300 up to 1200.

The device costs \$150 in the US, and is likely to be around the £100 mark here. For this you get a Hayes compatible box that is completely software controlled - it simply has an RS232 port at one end and two 87 sockets at the other, and is powered by a single nine volt battery. The device has yet to receive BART approval, but is expected to go on the market here sometime next year.

The answer to the Spectrum-users prayer the **disciPLE**

AVAILABLE NOW!

the all purpose interface to take
your Spectrum to the limit

DISK INTERFACE

- ★ Allows up to 1.6 Mls of storage on 2 drives
- ★ Loads a full 48K program in 3.5 seconds
- ★ Simple Easy Control
- ★ Compatible with any standard drive – single or double density, single/double sided, 40/80 track, 5, 2 1/2", 5 1/4"

SNAPSHOT BUTTON

- ★ Saves any program instantly – at any point you wish and as often as you like.

PRINTER INTERFACE

- ★ Compatible with the whole range of Centronics Parallel printers.
- ★ Uses normal Resdata commands –
LUSE, LPRINT, COPY
- ★ Prints user defined text and screen graphics

DUAL JOYSTICK PORTS

- ★ Sinclair and Konexon compatible

NETWORKING

- ★ Operating system allows Disciple to act as file server, shared access to printer and disc drive for up to 64 Spectrums
- ★ Interface 1 Compatible

Use the disciple with any Spectrum – even the new Plus Two model.

Umbrella body formed

A NEW microcomputer industry trade association, the British Micro Federation, was set up last week.

The BMF aims to fill and expand the roles played by the now-defunct Guild of Software Houses, and will include hardware manufacturers, software companies, wholesalers, distributors and the computer press in its membership.

Around 75 companies were represented at the inaugural meeting held in North London, and five areas head-lined initially for the federation's attention.

It was generally agreed that relations with national newspapers, television and other media were poor, and that a

less gloomy picture of the microcomputer industry could be presented. Most speakers concerned that thorough and accurate market research on the size of the industry and statistics on hardware and software usage was needed. Thirdly, a suggestion for the BMF to draw up a code of practice for members — pre-announcement of software releases was included here.

The need to act strongly against software piracy, in conjunction with the Federation Against Software Theft was also noted. Finally, the use of the federation as a forum for discussion and co-operation between companies went on the list.

Three from First

FIRST Software is to launch three new PC packages this month — *Decision Director*, *Ability* and *Priority*. *Ability* is an integrated package from Robert (see page 6) revolving around the £75 mark, while *Decision Director* is a lower cost alternative (£29.95) consisting of word processor, spreadsheet and window manager.

Priority is a £49.95 print utility designed to work with any word processor and to make it easier to control the printer's functions. First suggests it could be particularly useful with laser printers.

Details from First Software, Unit 20b, Hornstone Road, Hornstone Park, Pangbourne, Berks RG8 7SN. Tel 07367 6244.

Footnotes

LEVEL 8 has signed a contract with Delta 4 to produce a joint project special adventure for publication next Easter. Both parties are keeping quiet about the subject matter, but here we see Mike Austin (8) showing Pergus McNeill (4) a bag he's found in the program...

Commodore is meanwhile keen on convincing us that it knows just what we'd all like in our stockings this Christmas. The company's stand at next month's Commodore show will be "bristling with innovative gift ideas" including, apparently, "some of the results currently being derived from the Amiga in use at the Haverhill, Berkshire Archaeological Project, the largest rural excavation in the country." Just what we'd always wanted...

CSD on the other hand is

enrolling the virtues of its Sparklers range of budget games. "Sparklers are too good to be budget," they-jests the release. As we recall that's what CSD thought when it released them at full price some considerable time ago.

Well, if you can change your mind once...

Austin and McNeill

New printer from Brother

BROTHER is to launch a wrapped-up addition to its range of printers at the Which Computer? Show in January. The Brother 1700 will sell for around £595, has 138 columns and prints at 240 cps draft and 50 cps PLQ (near letter quality).

The 1700 has a 34K buffer

and its features, including the interface selector, line spacing and baud rates are all selected from the front panel rather than by dip switches.

Details from Brother Peripherals, Shipley Street, Guide Bridge, Audenshaw, Manchester M24 5JD. Tel 061-330 8531.

The Atari Christmas Show

New Whitehall Hall, Grosvenor Street, Westminster, London SW1
Details: Hardware, software and peripherals for the Atari range of computers
Price: £2 adult, £2 children, £1 discount for advance booking
Organiser: Database Exhibitions, 061-495-8825

Prices, dates and venues of shows can vary, and you are therefore strongly advised to check with the show organiser before attending. Popular Computing Weekly cannot accept responsibility for any alterations to show arrangements made by the organiser.

CSD joins the PC bandwagon

CRD America's Sparks Distribution is joining in the PC budget software battle with a new label - Trust Software. The first three products to be launched are Trust Writer, a WordStar-like word processor for \$49.95; Trust Speller, free with Trust Writer but separately \$19.95; and Trust Desktop, a Ram resident calculator/memo pad/Alarm clock/calendar combination for \$34.95.

These will be followed by Post Card and Post File specifications and database software.

Details from CSO, Unit 811,
Armstrong Mall, Southwood
Business Center, Southwood
Farmborough, Hampshire
GU14 0AF. Tel: 0332
832200.

Front end system for Dos

MRVALUERS is designed to provide an easy to use frame system and from good to

MSDOS, it allows up to 24 options per screen and up to two nested menus, and also features password protection. As a Dos front end it includes a batch file generator and editor, a look-out facility for unwanted Dos commands, a Dos tutor and online help. It will also automatically search through a hard disc organising all files under its menu system. The program costs £10.

Details from Royal Computer Systems, Cobble House, Hall Street, Chalfont, Bucks. Tel 0295 351500.

Writes issue from HiSoft

HEOFT has launched an enhanced version of WhiteBoard, a productivity tool similar in concept to Board's *SlideNet*, but on Amiga's CPC6128. It already runs on all the Amiga's CP128 machines, but the new version has been enhanced to take advantage of the 6128's graphics and keyboard layout. The program is available

Tatung offers Einstein bundle

TATUNG is now offering the earlier version of its Eimatec bundled with a 14 inch colour monitor for £349. The machine has 80C86, 3 inch disc drive, Cardtronics, RS232C and joystick ports built in. Unlike the new 286C it won't directly run CP/M programs, but expansion facilities are available, along with various

Details from Tasing, Sand
ford Park 10, Telford, Shrop-
shire TF3 3AB (0862)
877111

to run alongside standard applications software and includes a calculator, spell book, phone book, appointments diary, calendar, screen editor and key macro library.

The screen editor allows you to cut text from a file and paste it into your current document, while the key macro facility lets you reproduce sequences of keystrokes at any point in a given program. **Write-Hand-Mac** costs £29.95.

The Art of the Game

More to being a woman than cooking

Your *Ziggurat* in *Popular*, October 23 has prompted me to write as it cited out for further discussion (edited from a male).

Granted that the computer industry seems geared to male tastes, but surely there is room for female participation (between the ladies of *Hi Priestess*). Market research doesn't seem to be this industry's strong point, especially when yet another *JST* arcade game or Tolkien-esque adventure will bring the money rolling in.

Your article goes on to make serious, equally solid points, but doesn't offer a plausible solution to the problem.

I don't have a cut and dried answer, but I have another question: what kind of software would women like to use? On the face of it, there doesn't seem to be very much in women's magazines that would be better served by a computer interpretation.

Cooking or knitting programs (though certainly possible) are as tedious as they are offensive. There must be more to being female (I hope) than that I have a few suggestions:

a) Tips on the use of cosmetics using graphics and a database.

b) Diet and calorie calculating tailored to the individual.

c) Romantic adventures involving real people for a change.

d) Educational software with a shift towards the mother rather than the father.

To men this may sound like a recipe for boredom - do women feel the same way? I think it's time women made their feelings known.

Nick Cheesman
Farnham
Surrey

The Editor replies:

While we take your point about no solution being offered in the *Ziggurat*, it has to be said that neither of *Popular*'s two women staff were wildly wildly enthusiastic about your suggestions.

I dread to think what a bunch of low-rez pixels could do on an cosmetics program; diet programs have been around for some time now, and can obviously be quite useful (if you feel like loading up the computer every time you eat a Mars Bar), but I've not clear on why you assume only women need to diet. Advertisements involving 'people' rather than 'bells' is a plea we've covered in the *Ziggurat* column only recently. The idea about making them 'romantic' incidentally, went down like a lead balloon.

The point in the October 23 *Ziggurat* was about mainstream games catering for male tastes, portraying male heroes, and even as hard-core games where can defeat the Nights Tharg, etc. Somehow I don't think we'll ever see Judy Sheppard's Hagnets-

ions, Patricia Whitbread Throats the Javelin, or Marcellous's Whirlwinders in the shops, although these three are just as 'marketable' as their male counterparts.

Plus, look at all the games which involve the player as a Harlequin Ford-style hero off to rescue the latest 'helpless princess'. Let's face it, if you're an unweaned man stuck in a Harlequin type scenario, with dragons, locked doors and henchmen guarding over you, you're going to need some outside help.

Fun and education

Although delighted to read your article on the Commodore 64C Commodore's Collection (*Popular*, October

18), I hear that Andrew Mayfair may not have used the handout from *Compendium* submitted with the machine for review.

He would then have realised that this collection represents a deliberate departure from the previous games' jostling compendia in that it appeals less in providing whole family entertainment over the Christmas period and the basis for continued fun and educational value afterwards.

I appreciate that time may have disillusioned him a long time into the Leisure Genius games, but *Monopoly* and *Scrabble* in particular are not only faithfully computerised transfers of the original board games but, I believe, are better in many respects than the originals. Computerised bank balances and property records score heavily in favour of this version of *Monopoly* and the educational value of *Scrabble* is legion.

On the subject of value for money, the cost of the mouse and chess graphics package plus a £40 at a total recommended retail price of around £250 squares with the complete Collection a prize to the Desererts. Five board games and Pinball typing tutor are effectively free of charge. So, taking Andrew's recommendation to its logical conclusion - buy a Commodore's Collection and you have the basis of a sound investment.

Lastly, he suggests that 'a return to the software 64' will be Commodore's salvation. After four years and world-

continued page 12

Puzzle

Puzzle No 332

I am thinking of a four-digit number, with all digits different, said Arnold. And I want you to guess what it is.

BOB: I replied, guessing a guess. "Your number only contains one of the digits in the number - but it is in the correct position. Have another guess?"

I did so, and Arnold replied, "Very good! This time you have got all the digits correct, though not in the right order. In fact you are just 14858 too high!"

Of course, I now know what number he was thinking of - but can you work it out?

Solution to Puzzle No 327

Answers: Apart from 1934 (given in the question) there are two other four-digit

numbers with this property:

$$6350 = 8^3 + 3^3 + 0^3 + 5^3 \text{ and } 9474 = 9^3 + 4^3 + 7^3 + 4^3$$

Solution: In the program all four-digit numbers are taken in turn and placed in the string variable A\$. From this string, each digit is taken in turn, and the fourth power of the number is calculated. This is done by doing multiplication rather than by using the power command to ensure absolute accuracy. Any numbers in which the total of the powers of the digits equals the generating number are printed out.

Winner of Puzzle No 327

The winner this week is B Hambridge of Leeds. West Yorkshire who will be receiving £10.

Rules

The closing date for Puzzle 332 is November 24. Answers on a postcard please.

wide sales of six million units, the 81 is still capturing 30% of the total annual UK computer marketplace. Certainly it represents a substantial revenue earner for Commodore alongside the Amiga. First year Amiga sales will grow in at between 120,000 to 150,000 units worldwide. Pretty good compared to the Apple Mac's 140,000 first year figure for a machine that he claims is "obviously not going to become the same groundbreaker".

Harvest Marketing Services
PR Consultants to
Commodore (UK)*

Eeney meeney miney mo . . .

I was interesting to read the two letters published in your October 16 issue, making comparison between the Atari ST and two other machines.

The 1040 ST is on my short list for purchase, together with the expected new

CL improvement, the OLT by Sandy, and perhaps also the two new versions of the Commodore Amiga, expected soon.

My needs are rather more like those of Howard Oakley (Letters, October 16) than to the games player from Belgium.

However, the letter's desire for good sound and excellent colour graphics could, I suspect, be alternatively satisfied by the new Taring Electron, if only it had 512K rather than 256K.

And the new Apple II05, plus the rather expensive Amiga, could excite him, too.

But I am really after a cheap alternative for the Apple Macintosh Plus for desktop publishing and other business applications. So the micro-drives 1040 ST plus Micro-soft's anticipated Fleet Street Editor could be the answer.

One final point - can anyone advise me about Ram discs?

Would the use of Ram disc software such as that marketed by Hobbes for the ST enable one to manage without a second hard or soft disc

drive? What is the normal advantage of having double rather than single disc drives?

*PJM Kingston
Bristol*

Fantastick?

I read with interest the article on the Fantastick 2 joystick (Popular Computing Weekly, October 2). I saw article, although it reads like an advertisement for an extremely ordinary overpriced joystick.

All right, as it has four buttons on the base, an automatic fire switch and an MSX switch. The Spectranetics Clickstick 2 offers the same at half the price.

I know it doesn't have an MSX switch, but that's because it doesn't need one. It just works anyway.

I use my Clicksticks on my Commodore 64, Yamaha CX6M and Toshiba FX-10, without any problem.

I also use two Coloco joysticks (old games controllers) on all the above computers, again with no problems.

They don't have automatic fire, but they cost £1 each in a secondhand shop.

*Nigel Jenkins
Cardiff*

QL and ZX magazine

I would like to announce a magazine for Sinclair QL and ZX Spectrum owners. It is called QL-ZX and is produced on Microdrive cartridge for both computers.

It has a strong bias towards programming (especially networking between the computers), but also includes reviews and other articles. QL-ZX is available from the address below. Send a cheque (payable to P Leverstall or PO for a mere 50 pence plus a Microdrive cartridge, stating which computer you would like the cartridge formatted on.

Get writing - get Popular

Popular Computing Weekly always welcomes contributions from its readers for articles, features, and program listings.

Whether you want to write articles, see your programming masterpieces in print, pass on some words of wisdom, or simply let off steam, there's space in the magazine for you.

Ideas for **feature articles**, or completed articles, should be sent to Christine Ewins. All aspects of home computing are considered, but we cannot possibly accept anything longer than 2,000 words, so brief is best. It's worth checking by phone or letter first that your article will be suitable. Payment is normally £35 per published page.

Technical editor Duncan Evans looks after the **program listings**, and articles on programming. We rely on you for our Programming section, so send yourself a place in the Popular mail of June (and £25 for each page we print by listing your program published). Even if it's not 100% of K of pure machine code, but a short snippets routine, there may well be a place for it in **Bytes and Pieces** (10 a month).

Articles on any aspect of programming are also welcome - with short listings included if relevant.

Got something you feel needs saying loud and clear? Your opinions on any aspect of the computer industry are welcomed, so why not write in to the **Zigzag** section? No more than 600 words, please. If published, we'll pay you £15.

So maybe it's not the money you're after, but you'd just like to have some say in the magazine.

For shorter comments, general observations or queries, there is of course the **Letters page**, with the tempting offer of a year's supply of Popular looking for the Star Letter each week.

For more specific points, our team of columnists are always willing to answer questions, and keen to hear the latest information. Drop your lines to **Tony Bridge** (adventure hints always gratefully received), **Tony Kendall** (java wars, so many Arcade games, mags, solutions, etc. as possible), **David Wallis** (communications), **Kenn Garrett** (programming problems), **Mark Jenkins** (music queries and sample tapes) and **Martin Bryant** (computer chess comments).

All letters should be addressed to Popular Computing Weekly, 12-13 Little Newport Street, London WC2N 7PP. If you mark your letters with the department you want, things get processed much more quickly.

Left: the adventurous Fleet Bridge. Right: the writer Tony Kendall.

The return of the prodigal Adventurer's Club

Tony Bridge uncovers the mysteries of adventurers' support groups

One of the most successful adventure players in recent months has to be *The Adventurer's Club*, run by Henry Mueller. The combination of a full-time club offering help, well-founded advice and discounts to adventurers proved irresistible to many of the hobby's adherents.

During the early part of this summer, however, I started to receive letters from members worried about the lack of response from the club — a dilemma common state of affairs, I'm afraid, in the atmosphere of today's home computing business, but I was surprised to hear that this particular operation seemed to have gone the way of other less thoughtfully-run clubs.

Throughout the summer, all has been very quiet from *ACL*, while I have opened more and more letters from disgruntled members. By now you will probably have read that the club is back in business, with Henry once more at the helm. He is now in full control of the club, rather than the managing position he held before and has obtained the services of Hugh Walker, *Adventure Supreme* and

Richard Bates, the originator of *MUD*. Pete Austin of Level 9 will, I believe, continue as Honorary President.

If you are serious about your adventuring, then it's well worth joining *ACL* as it is one of the best. However, the whole episode must serve as a warning to everyone that things can go wrong — even enthusiasm is not enough.

In the meantime, other clubs and magazines carry on. Nick Wakeland's now-classic *Discworld* is my favourite. Many pages of adventure notices, comic strips (well, unfortunately, uncredited), the usual verbose letters (I love 'em) and of course the requisite tips and help for just 70p is a great deal — and this is one of the few magazines that receives contributions from established writers in the field such as Bob Chappell and Mike Gorkard.

What is evident from reading *Discworld* is that adventuring is obviously fun to the producers of the then-profit making magazine. Write to Nick at 84 Kinsale Road, Sheffield S8 4QH, or ring 0742 340433.

Pat Winstanley and Sandra Shuckley

are still battling away with *Adventure Probe* and *Adventure Contact*. *Probe* is the usual stuff of help, advice, letters and reviews — although the magazine is well-written it's a bit pricey at £1, although there is a very easy atmosphere about the whole thing, and Pat and Sandra seem to encourage a lot of support from women adventurers as well as men.

Contact, on the other hand is unique and a much better deal for just 50p: in this magazine, you'll find all sorts of advice on writing and marketing adventure programs, drawing on the personal experiences of authors who have already taken this plunge. The present issue has a detailed breakdown of the differences between the *Gulf* and *Imaginator's* GAC, as well as articles about packaging, copyright matters, Do's and Don'ts of adventure-writing and so on. Senders for *Probe* can be found at 20 Merton Road, Winger WH3 6AT, and Pat (the Contact arm of the enterprise) can be contacted at 12 Hollington Way, Winger WH3 6LS.

Next week: news of a new *Gulf* and some new games coming out.

Adventure Helpline

Rebel Planet on Commodore 64. I cannot open the outer hatch of the space ship *Chadra*. Played until 8.10 to Grosvenor Park, Canterbury, London SE25.

Empire of Ram on Commodore 64. How do I get the diamond from the snake? What do I do about the crack in the pyramid? David Westerdale, 8 Upper Town Road, Greenford, Middlesex UB8 3JL.

Kastilla on Spectrum. I cannot find the gold key. I cannot get the last with the sword to stop killing me. I cannot get the iron rod without dying. Luke Buxton, 66 Seacroft Gardens, South Shields, Tyne and Wear.

Return to Ithaca on Spectrum. How do I catch the cat? Where is the road I need to go? Alan Hughes, 22 Tychford, Mansel Bridge, Gwynedd.

Souls of Darkness on Spectrum. How do I get the sea? Also how do I get the crystal? Sean Haydon, 30 Prewett Lane, Blisdon, West Midlands.

Dungeon Adventure on BBC B. How do I get the horn without the goat killing me, and how do I kill the black sphinx? Mrs Barbara Gibb, 52 Surfard Road, Liverpool L16 6AT.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, registering your prob-

lem, send it to us, and a fellow adventurer may be able to help.

Remember — the system only works if those adventures who have solved the puzzles get in touch. Every week I save An Adventure Today (AAT) issue!

Souls of Darkness on Amstrad CPC 6128. I've found the sword, sea, mushroom, and—gravelly bath, ring and coin, but I cannot get past the moonlight. Help! Mr D Adkin, 78 Chiswell Road, New Bannel, Herts EN4 9ED.

Wear boots, give glue to aliens

Tony Kandle (finally) tells you exactly how to solve Knight Type

As promised last week, we have the jokes here for Serny and Seamus for the Armed Forces. I hope you like them. No Hackers Uninvited.

Before proving the complete solution of Knight's game from John's Mayer, which we'll do in two parts I thought it would be as well to give other people a chance by slipping in the following from one or more other posters.

Stephen Johnson of South Oklahoma sends the following tip: "The bag runes will enable you to find the 'mystery oracle' spell. If you wear the magic talisman you can remove the barrier [however, the game can be completed without this]. Pay close heed to the information given at every planet you visit."

Stephen writes that "Eight Type is one of the best games I've ever played as, unlike many arcade adventures including Spellbound, it holds the player's interest with problems that I had no been returning to."

Phil Webster of Madison Monarchs had not finished the game when he was hit but says he is fine, which we will follow up with Adams's commitment to the solution.

Upon starting go left one room and take the instant line from Gordon and the McTabler from Sarah. At no time must you drop the letter. Drop gadget X. Unseal your cloak of invisibility. Go left one room and get the carrots. Go right three rooms and command Dorcas to help and a blank ID card will drop onto the floor. Pick

"Next find the small robot SNEZ (make sure it is real) the robot Klinki and give him the instant film and the camera and then command him to help. You may have to water him up first. Then take from him the photograph and the pot of glue and select the wear command from the menu and select the, rain valid, 80 card. You can then ask Sanku at the bridge for help and get the advice from Shaker. You can finally see if you really it."

Arthur Meyer comments, "You don't know Moscow, but Soviet Russia exists." It does.

necessary but it makes her feel wanted. You can never get the map and the standard and you will find that you can go on in the world.

"Before you get to Monopolis go to Starbase one where the transporter will be fixed and where you can refuel. (When travelling between planets always use Time Desert. 1 is it saves fuel, otherwise you may not get enough at the planet to refuel. Some of the planets which give you fuel are Hail, Eden, Lync, Monopolis and Tronera.)

Also from Starbase get the boots in the last room. In the 129C game the quest bomb is used to blow up planets but I don't think it does anything in the old game. Get the box of resistance to

gle - get this and take the part of a
 needed and tell me how to know

'On the ship uncover the gas mask and the clock and go to Petros. If you hang around Lyle and turn into their radio you will find Murphy's coordinates but, just between you and me, there are 88 44 12'

"Once down there you may have to use the reserve barrier spell to get the job. Take the rest of a loaded off day."

When you meet up with the Tyni guardians take care because they are flying – go out to Tynians to find out why. Alternatively just tell one to the coordinates that they give you. Before you board down put the three central parts together and rest the lightning bolt. Cast this again after they give you a machine. Before you launch it remember what they said at

Here is a list of the countries
for which we have information:

give to Murphy on release. Wear the boots. Give the glue to an alien – I can't remember his name but he is green if you have chosen the attitude option at the beginning – but ask them all for help.

I found the hardest part was getting the coordinates of USB Places - they made me give up the game until I got help - the answer is of course NO NO NO.

At Monopole wear the gas mask and cloak of invisibility. In the life boat room you can get coordinates on a terminal, in the control room there is a yellow light

Star Trek!

In the year of the twentieth anniversary of the world's best-loved TV series, it's appropriate that the event be marked by what looks like being a classic computer game, writes *Chris Jenkins*, and that's what *Star Trek* is about.

Star Trek is known throughout the world, and re-runs of the 60-odd TV episodes are still being shown, together with the three films (and another in production). The *Star Trek* game, from the Beyond label, is near completion and looks like a stunning production effort which will capture the imagination of thousands of Trekkies.

The *Acorn ST* version will be closely followed by *IBM PC*, *Amstrad* and *Spectrum* games. In each the format will be similar but it's the *ST* version which will probably have the most impact with its incredibly detailed graphics and enormous playing area.

The actual title of the game - *Star Trek: The Next Universe* - reflects the format of the adventure. It takes place in an enclosed globe whose units of *Star Fleet* have been going rogue and throwing it their lot with the despicable Klingons. Your task is to patrol the globe, hunting out the rogues and bringing them back into the fold - or eliminating them. The main display shows all the main members of the cast on the bridge, the TV version incidentally, not the movie

version. Using the mouse you move the *Star Fleet* insignia to the character you choose and click to bring up the command screen.

The individual portraits of the main characters - Kirk, Spock, Scott and so

on - are wonderfully drawn by artist Steve Cain, and could almost be photographs. As each character's command screen fills the main area, the bridge display is relegated to the sidelines, ready to be called again when you want to access a new character.

Each character controls a different

aspect of the ship's operation: *Sub* navigation, *Chelav* weapons, *McGuy* medical and so on. It's up to you to select phasers, photon torpedoes, warp drive, and all the *Star Trek* paraphernalia we have come to know and love.

Your first task, obviously, is to select a star system and warp to it. You use *Sub* to set your course on an incredibly animated 3-D star globe that wags to the star system and scans for inhabitable planets. Putting together a team supplied with appropriate equipment from the stores is the next task; then select the Transport option to beam down to the planet.

Quite limited, your team must negotiate alien complexes, solving the puzzles of locked doors and intractable aliens using their individual skills and the equipment available. Should any character be injured by dangerous aliens or alien jetties, it's back to the ship and straight to sick bay for *McGuy* to work his magic.

The action is illustrated by gorgeously detailed graphics of the *Enterprise* in orbit and any alien ships you might encounter. Apart from the familiar Klingon and Romulan battle cruisers, these will include fast-moving *Turian*-killers which grow more vicious as the game progresses.

The battle scenes take place on two screens: a medium range scanner which revolves to show the location of incoming hostiles, and a short-range display in which you target wire-frame graphics and launch your photon torpedoes. Watch out and still you should see the alien cruisers disintegrate; if so, and you haven't sustained too much battle damage, it's on to the next star system in search of the next artifact or item of data you need to complete your quest.

The finished game will include communications routines for *Uhura* to perform, sampled speech from the TV series, and authentic sound effects. With 256 sub-plots to complete, and a number of different win scenarios (plus any number of losing ones) it looks as if *Star Trek: The Next Universe* is going to provide a feast of entertainment for games players of every type.

If you're tired of *Spies*, *F15s* and the like, this is the big one. US Gold's *Dam Buster* puts you at the controls of a Lancaster bomber, and pits you against Flek, searchlights and of course the dams in an effort to do severe damage to Germany's war effort.

Unusually for a flight simulator you play six characters in all - navigator, flight engineer, pilot, bomb aimer and front and tail gunners. You switch between these with the aid of the function keys, and the nearer you get to your

target the more frantic the action gets.

The game can be started at one of three points: dam approach, in mid-Channel or at your base airfield, with the difficulty level being varied simply by the distance to the target. Starting from base you switch to the navigator to set the course, then to the engineer to fire up the engines, then to the pilot to take off.

Once you're airborne you adjust the balance of the engines and toggle between gunners and pilots, with the odd dose of flight engineer to

More bluster and fluster

adjust speed or put out engine fires.

The gunnery section pretty well knocks any idea you might have had about simulations on the head. You spend the entire mission blazing away at Flek, searchlights and enemy fighters, and while it's entertaining from an arcade point of view you generally find you've knocked out more than a self-respecting Flek could reasonably sustain. I was also a little perplexed to discover that you met as much opposition over Wales as over the Ruhr...

Once you abandon the Welsh Water Authority and get to the real target you need to line up the aircraft at the right height and speed then switch to the bomb aimer, who fine tunes the height and

drops the bombs. In my experience you then get a pretty picture of your bomb bouncing across the lake - and missing.

As a game it's diverting enough, but I feel it could do with a little extra something to make it great entertainment. And on that subject I notice that the wrapping says 'Lancaster' model after model. I've never had an offer from a Lancaster model, but as it hadn't been included I remain disappointed.

How to win an Academy Award

Pete Cooke's *Sea-Cel* was acclaimed as one of last year's best games, with original 'moon-scape' style graphics and sophisticated controlling of your craft through choice of over

each and to qualify to move up a level you must score over 90% on your present stage.

Menus are used to take you through the gradual steps of selecting a mission

Having done that, you can set off on the Level 1 missions, amicably called it a *Mission*, Red Dawn, Meltdown and Softly Softly. A separate screen gives some rather enigmatic details about what these entail.

Having chosen your mission, equipped your skimmer, and launched yourself on to an unsuspecting solar system, you find yourself in a very Sea-Cel-esque scenario of strange shaped objects looming up from the distance, smooth, swirling movement from right to left, and plenty

to shoot at.

The instructions with the game are long and fairly daunting - rest assured that the game is rather more straightforward to play.

If you liked the graphic style and gameplay of *Sea-Cel*, then *Academy* isn't going to hold any disappointments.

Popular Appeal ★★★★★

Christine Ebbels

Program *Academy Wars*
Spectrum Price £39.95
Supplier CRL, 8 Kings Yard, Capenhurst Road, Garsfield, London E7 5

"A really nice touch here is the option to design your own skimmer"

space.

Well, every good game deserves a sequel, and Cooke has now come up with *Academy - Sea-Cel II*.

Academy has you as a student pilot at the Galactic Academy for Advanced Skimmer Pilots, taking on 20 missions in order to graduate from the college. The missions are divided into five levels of task

to try out and a skimmer to go with it.

A really nice touch here is the option to design your own skimmer, rather than settling for GCS Lark, Lincoln and Strider, already provided. You can put all the instruments and controls exactly where you find them most handy, and choose your own equipment - within a budget.

The tassiest game in the world

Forget about street credibility. Elimination '84 and 'cool' from your vocabulary. There's a new quality to be had.

Tass is what it is, and Tassetown is where it's at. And you can get it in the latest adventure from Activision, *Rass Direct in Tassetown*.

In Tassetown, however, being tass is not merely desirable, it's essential for your survival. Because if you're not tass, you're a tourist and local mean machine Franklin Charl has a way with tourists.

He leads them to his Crocagators.

If this is beginning to confuse you, let's backtrack a little. You start at the deserted home of your friend Grampa - deserted, that is, except for his faithful dog, Spot.

Your first task is to find the transdimensional doorway to Tassetown where Grampa has disappeared.

In Tassetown you can't do a thing until you get tass. That means buying new clothes, a new hairstyle, and getting a job. Check out the copy of the Tassetown Times that came free with the game for some ideas.

Once you stop looking like a tourist, you'll find the locals helpful - hang out at Fast Freddy's, check out the Daplets concert in the park. But watch your back.

Your stickle for the duration is good ol' Spot. But in Tassetown Spot is better known as Brins, ace reporter for the Times, six times winner of the Inter-Minor Ultra Journalism award, and known locally as The Legend.

As you've probably gathered, *Rass Times* is an adventure like no other. It's illustrated, and animated, with an excellent musical soundtrack too (wander into the Wetlands and you'll get a dove encounter with a Crocagator to the accompaniment of mean and moody Jaws-like music).

There are traditional adventure puzzles to be solved - a deep, dark well where you'll receive a light, for example - but *Rass Times* is original to the nth degree.

The parser is not up to Infocom standards, the graphics are no match for *The Pawn* but *Rass Times* can hold its head up in any company. Can't be a tourist - get with what's tass.

A different game

Why is it that new shooter or pool games always have "The Entrepreneur" as their theme tune? After loading up Electronic's Pool from micro, I'd guess that was the first thing to issue from the monitor's speaker?

If you were expecting a game of eight ball Pool then you would be in for a disappointment because EP only has seven (including the white). Initially I groaned at

this, but then I realised just how boring that would be as a game and how much better Electronic Pool is because it's different.

What you have here are the six balls and the six pockets numbered from one to six. The game is all about points. So, if you sink the six ball in the pocket labelled six, then you score 6 x 4 = 10 points. Just to keep things interesting once a ball is potted the number on the hole move

round and if you're playing against someone over a set number of frames (one to eight) then all the points scored are multiplied by the frame number, including those four holes.

In the one player game you are given three "lives" (ie to sink), in some as many points as possible, this registering in the Hall of Fame (not permanently however - boo, hiss). Committing a foul or failing to pot a ball on three consecutive shots costs you a life.

The algorithms concerning

ball movement and reaction are generally very good with most shots going where you aimed.

Disappointingly, Electronic Pool utilises none of the ST's advanced abilities, but is still a fairly entertaining game.

Popular Appeal + + +
Duncan Evans

Program *Electronic Pool* Micro Atari ST Price: £19.95 **Supplier** Microdeal, PO Box 88, St Asgell, Cornwall PL25 4TB.

A weak and pathetic effort

Every obviously have a thing about flogging a dead horse. Witness *World Games* - the follow up to *Summer Games*. While *Games* and *Summer Games 2*.

This time you travel in jumbo around the world to various locations which bear little resemblance to reality to compete in weightlifting, barrel jumping, cliff diving, slalom skiing, log rolling, ball

rolling, cable taxi and some wrestling for all events.

Weightlifting in *Slapshot Russia* is a fairly bland affair, no crowds outside the hotel at midnight keeping you awake and no 1000 agents giving you strange parcels at the airport.

Ball rolling, cable taxiing and log rolling are basically garbage, the graphics being amazingly uninteresting.

Cliff diving in *Asagapala* is good fun, the impact of the diver against the rocks when he becomes his dive and the accompanying *Phunk* is almost painful to watch.

Slalom skiing, some wrestling and barrel are all done competently but this is hardly good enough. Indeed, the entire package has the feel of something knocked out in a hurry before people get com-

pletely phased off with sports simulation.

Cashing in on the public domain

If you own an IBM-PC compatible, Marcus Rowland can tell you where to get some reasonably good software for cheap

It's now possible to buy a complete IBM-PC compatible computer at less than last year's price for an eight-bit home system with monitor and drives. With the arrival of Amstrad on this particular scene, interest among individual users, as well as small business users, is soaring.

A problem which will probably continue for some time is the fact that PC software prices range from expensive to exorbitant. While manufacturers have begun to produce more reasonably priced packages, under pressure from Alan Sugar and Amstrad's own pricing policy, they are still far more expensive than their eight-bit home equivalents.

One alternative is the cheap and free software distributed by special interest groups (Sig) libraries. All of the software in these libraries is either public domain or freeware. Public domain software is available without any obligation; the user is free to copy it, modify it, and pass on copies at will.

Freeware is also readily available, but there are usually a few conditions to its use.

In general, the author hopes to be paid for programs if they are useful, and asks users to pass on all of the original unmodified programs including subsidiary files and documentation, if it is on the disc; if copies are given away.

In return, registration of a program is usually rewarded with the latest update of the program, often including source code or enhanced features.

Some of these programs are too bad for commercial distribution, others appeal to special interests. A few are original or provide cheap alternatives to commercial products. Nearly all are American. Usually there are no guarantees of reliability or compatibility with any given hardware or operating system configuration.

The most important open-access PC libraries are probably the American PC-Sig and PC-Bus collections, and Britain's

"Some of these programs appeal to special interests - a few are original or provide cheap alternatives to commercial products"

The IBM-PC compatible

PCBSIG (PC Busin Board UK) library. Several British suppliers have access to these collections. Usually it costs £1.50 or £2.00 to have the contents of one library volume (300K) copied to a formatted disc, plus postage, though this can vary between different suppliers. All now charge a membership fee.

Many of the programs in these libraries are bug-ridden or otherwise useless; the selection below covers software I've liked enough to keep. It also reflects my own interests; since I don't use financial programs or spreadsheets they aren't covered, but I've probably given word processors and auxiliary programs a little more attention than they deserve.

Most of the volumes contained include additional programs, of varying quality. All of these programs include some documentation, though the quality is very variable.

Programs were tested on a 540K IBM PC with a colour card and RGB monitor, using PC-DOS 2.1, and were also tested

for compatibility with Salsalad, a regular memory-resident program that is a good test of software bugs. The first two have also been tested fairly briefly on the new Amstrad PC, however, in the crush of the PCW show it wasn't possible to test all programs comprehensively. They were not, for instance, tested with Gem loaded. All are claimed to run in 256K or less.

Probably the most famous freeware program is PC-Write, a word processor by Bob Wallace (Quicksilf). The current version (2.4) has a maximum file size of 62K, approximately 48 double-spaced pages, and is fast and moderately user-friendly.

Unfortunately this program tends to suffer compatibility problems with each new release; there always seems to be differences between control keys, embedded control codes, and the like.

Features of this release include split-screen and multiple document editing, DOS commands from the program, mail merge, document merge (to allow final documents much larger than 62K), printer control codes, and an extremely wide range of configuration options, covering every aspect of program operation, display, and screen control.

The main limitation is that this isn't a "what you see is what you get" program; text is only formatted when it is printed, and page breaks aren't shown on-screen. There is a 41-page manual supplied as a text file on the disc; this isn't the complete manual, which is supplied on payment of a \$25 (around £25) registration fee, along with the latest version of the program and its source code.

If someone registers a copy of your registered disc you'll be sent \$25 (about £10), given away through copies and you make a profit! Versions up to 2.055 were supplied with full 350-page documentation, as a compressed text file, and are still available. PC-Write version 2.55 is on PCBSIG volume 63, version 2.45 on PCBSIG volume 201. Earlier versions can be found on other discs. All versions support a wide range of monitors and printers.

While PC-Write covers most aspects of word processing, neither gives an on-screen display of form, except by showing a marker for each control code. Chatterbox, by Horstmann Software Design, remedies this omission, but is less than ideal in other respects.

It shows 10 lines on-screen (in the

continued on page 29

► continued from page 18

PC, in mono graphics mode. These fonts include normal text, bold, italic, and English, Greek, and a range of other scientific and mathematical symbols.

It's advertised as a scientific word processor, and can assemble complicated multi-level equations. The procedure isn't particularly simple, but the results are extremely good, ranging from draft quality to a high-resolution print mode that takes several minutes per page but produces extremely impressive text.

The main aim of the program is the author's method of persuading users to buy the program; it displays a 30-second advertisement as it loads, and on every five thousandth key press. Users who register the program get a version without the advertisement.

There also seems to be a bug in the printer configuration program supplied when you assemble the configuration data on the disc, making the program abort as it loads. Luckily the default setting is for most Epson dot matrix printers, and should be suitable for a wide range of machines.

Finally, the text display isn't particularly clear on a standard IBM graphics monitor and other actions with the same resolution probably including Amstrad.

Full registration of *Chamber* costs \$69.95 (about £60), with further payments needed for Hercules and EGA graphics cards, popular alternatives to the standard IBM colour graphics display. Registered users get additional printer support, the latest version of the program, an editor for additional fonts, and a full manual. As it stands this program may not be a good alternative to Microsoft *Word Junior*, unless you particularly need the more specialised graphics it provides. *Chamber* is on PC-Disk volume 173.

PC-DeskMate is a memory-resident program designed as a replacement for *StarCalc*, offering *Sidekick*'s features of rescaled text editor, modern dialer, calendar, and diary, plus additional features such as an alarm clock, disc utilities, and printer control. Not surprisingly, it isn't compatible with *Sidekick*.

Another problem is that it doesn't save text files in ASCII format, which makes it difficult to use this program to extract text from one file and paste it to another in common use for *Sidekick*. I wasn't able to test this program on an Amstrad, and would advise users to be fairly cautious. Registration is \$25 (£18). *PC-DeskMate* is on PC-Disk volume 133.

Three By Five (Softshell Corporation) is an unusual database package, designed to search through documents for references and create a report or separate files based on the documents it checks. It can cope with a wide range of files, including ASCII, Wordstar, and the like. It also has word processor facilities and can be used to edit documents as it

searches them.

One unfortunate aspect of this program might rule it out for some users; it moves the printer as it loads, and anyone who uses a print spooler or buffer may find that they can't use it during a long print run. *Three By Five* is on PC-Disk volume 173, with documentation and sample files. The author asks users to register their copies, but doesn't seem to ask for any fee.

After Office by FreeSoft is a collection of disc tools, including a disc ripper, a file recovery program, a specialised formatting routine, and an optimiser. All seem to work well, though they require some knowledge of the operating system and machine code for safe use. Bearing this in mind, it's always advisable to work on backup copies of discs; various utilities allow safe copying of a corrupted disc before salvage is attempted. Registration costs \$40 (£28), with the benefits of telephone support (not particularly useful in Britain) and \$15 refunds if copies of your disc are registered in turn. This package can be found on PC-Disk volume 246, along with a database by the same author.

Letbug by David M Green is a limited implementation of Logo incorporating graphics (including some matrix commands) and sound, but omitting list manipulation, the ability to save screen images to disc, and variable numbers of arguments to primitives. The disc holds 64 pages of documentation, and some prepared subroutines. Scovelite, for example, draws a lovely Pascal pattern. My only criticism is that it runs fairly slowly; I've seen implementations for other computers that worked at double or triple the speed, and the turtle routines in *Turtle Pascal* are faster still. Registration costs \$25 (£24), no benefits are specified. *Letbug* is on PC-Disk volume 64.

Other languages available through user supported channels include several machine-code assemblers, *Usp* (Uisp, on PC-Disk volume 78), *Perth* (Pip-Perth, on PC-Disk volume 54-5), *Justen & Perry Perth* on PC-Disk volume 383-4, *Prolog* (PC-Disk volume 417), *Pascal* (PC-Disk volumes 424, 519, and 540), and *C* (*SmallC*, PC-Disk volume 181).

Many of these implementations diverge from industry standards or are limited in other ways; for example, the two Pascal compilers are mutually incompatible with each other and with the most common compiler, *Turbo Pascal*, while the third Pascal program mentioned is an interpreter that's incompatible with anything other than a restricted subset of the language, but allows on-screen debugging and single-step operation of programs.

There is also a huge range of discs containing useful subroutines for various languages; most are for *Turbo Pascal*, followed by C and Basic, with other Pascal variants trailing in fourth place.

This survey has necessarily been extremely brief; for example, I've not mentioned any of the huge range of communications programs available in the public domain, from simple modem packages to complete bulletin-board systems.

More information on these and other programs can be obtained from two organisations:

Public Domain Special Interest Group,
1705 Holbye Road, East Grinstead, Sussex RH11 3BA, Tel 0402 312883 (also File bulletin board);
CompuLink Users Group, PO Box 383,
Slough SL1 8JJ, Tel 0494 7 6828 (also File bulletin board).

In two weeks time we'll look at public domain games available for PC-compatibles.

This Disciple is no Judas

One of the problems with the Spectrum is that in order to build up a sophisticated system, you must add on many peripheral units, all of which must plug in to the user port. What's obviously needed is an interface which serves many functions, and if possible offers some new facilities. The Disciple seems to qualify on all counts.

This innocent-seeming unit offers disc drive interfacing, disc program transfer, communications printer interfacing, networking and dual joystick ports, and costs a lot less than buying all these separately (apart from the obvious increase in ease of use).

The Disciple itself isn't similar in appearance to the Sinclair Interface 1, and is in fact compatible with it. It fits on to any Spectrum, via its standard user port connector, and is screwed into place, tilting the Spectrum to a convenient typing angle.

To the right of the unit is the disc drive connector, to the rear are the networking sockets, two D-type joystick ports, followed on user port and communications printer port. On the left are the two control buttons: the inhibitor, which disables the interface's operating system in the case of a clash with incompatible peripherals; and the snapshot switch which can be used to produce screen dumps.

The virtue of the Disciple is that it can be used with any standard disc drive, single or double density, single or double sided, 40 or 60 track, 5 inch, 3½ inch or 5¼ inch. Likewise, any Comarc printer will do. This is because the operating system, which is usually loaded from cassette, can be tailored to whatever add-on you have.

The pre-production version of the operating system consists merely of a series of test screens asking you to enter codes to define the type of drive, type of printer, and various options for line spacing, special printer functions, networking

features and so on. Once you have defined your system, you can save the file to a formatted disc for future use.

In operation, the system file resides in the Disciple's Ram and so takes up no Spectrum memory space. Unfortunately you must use the inhibit button to disable certain functions if you want to use a microdrive and Interface 1 while the Disciple is attached. The Disciple disc operating system allows up to 800K to be accessed on a double sided, double density disc. You can use

any disc drive with a standard Sugart connector typically, a BBC compatible unit.

Up to two disc drives can be used concurrently, using file names of up to ten characters to store several different types of file. Basic, data arrays, character arrays, machine code, screens, microdrive format or 'snapshot'. The different types of file are identified with a code letter and a display of the file space used, when you list them using the Car command.

The syntax used for the disc drives can be the same as that for microdrives, to make life easier; however, there is a simpler syntax available which addresses the drives using the prefix D1 or D2. Files can be renamed, copied, erased, autosaved, and so on. The computer can be reset without disrupting the DOS, and you can also use the Disciple's 'snapshot' button to dump the entire DOS (just 128K) program to a disc. This is of obvious use in creating a disc software library, and in saving programs at crucial points.

Using a printer is pretty straightforward, having defined your operating system in the question-and-answer session, you just use LPrint and LList. Two positioning commands, Find and Gt, are also provided. It's also possible to produce screen dumps from any program, using the snapshot button and the caps shift key.

Networking allows up to 63 Spectrums to be linked with Disciples, to be

linked together in a system sharing master disc drives and printers. The applications, especially for education, are obvious: again, the file saving system is defined in an opening question-and-answer session.

Finally, the Disciple's two joystick ports can be used either as Kempston standard (single stick) or Sinclair (double stick). With a claimed data transfer rate of 128K/second using a single density drive, and access time of one second, the Disciple's most obvious virtue is that it gives Spectrum owners easy access to disc storage. The snapshot facility, printer interface, and joystick ports and networking are big bonuses.

My only reservations about what must be seen as a very desirable purchase are that the pre-production manual and operating system software use pretty primitive—a huge amount of prototyping would be useful—and that both of the review model's switches disintegrated. A dab of superglue remedied these, though.

That apart, I can't think of many Spectrum owners who would not leap at the chance to get their hands on the Disciple.

The Elite joystick

From traditional sticks . . .

Electronic's latest entries in the joystick stakes cover the range from traditional to totally space-out.

Both offer something for first-time buyers and experienced games players looking for that little bit extra performance; and since the sticks feature the standard D-connector they can be used with Commodore, Atari and Amstrad machines, plus Spectrums with a suitable interface.

The more conventional stick is the Elite, which has an unusual body steel shape but is in fact quite straightforward and easy to use. The Elite is made in high impact ABS plastic with a steel shaft.

The Elite also features micro-switches, making for precise directional control. The unusual bulbous shape is very comfortable for their left or right hands, and the two fire buttons—a large one for single shot and a smaller one for autofire—have a positive action.

Bored to accuse more controversy is the amazing Joystick. Though it isn't exactly the same as a joystick, it looks more like the Commodore master plan, with a large spherical controller, a flat dog-bone shaped base and five controls. However, as the Japemag instructions explain, this is "New weapon beyond joystick! High technological forum based

The paperless office must wait

There is one single technological leap that must be accomplished if we're to achieve the paperless office, factory and/or laboratory. Now you may think that dispensing with paper is a matter of getting everybody to communicate with the aid of computers and modems - and that's happened we can just dump all the paper, check!

Well that's not strictly true, firstly because tests in the US have already shown that the current generation of keyboards isn't absorbent enough for the paperless laboratory to become a reality, and secondly because no matter how many of us have the necessary kit there will always be some odd one who insists on banking out text with the aid of Bledlow Bond and John Bull printing set. Now if you've got everything geared to handling digital information, on disc and in files, the arrival of paper-based analogue information is decidedly unwelcome.

The point is that the paperless office needs to have an interface to paper if it is to take off - basically, computers need to learn to read.

Now they can do this, but it's a complex and expensive process. Page scanners costing several thousand pounds will read in the patterns of letters, compare these to patterns stored in the computer's memory and assign an ASCII value to the letters provided they're recognised. The expense lies in two areas. The method used to read the data on the page has to be highly accurate, and the software has to be flexible enough to recognise a letter in many different positions as being the same letter. You may be able to read it better, but getting a computer to do so isn't so tricky.

The Oberon Omnisreader is a valiant - but it must be said failed - attempt to break through the optical character recognition barrier. It was first launched around two years ago at £400, which is

"The basic concept of the Omnisreader... consists of a flat surface with a ruler attached - place the text to be scanned in a window in the ruler, one line at a time and track the scanner along it"

still staggeringly cheap for this sort of device, but unfortunately the compromises inherent in cutting the price to this level stopped it from establishing itself. Oberon went bust, but the beast is now on the market again, and at £29.99 is going so well that the vendor has just phased me up telling me the price has gone up to £49.99.

The basic concept of the Omnisreader is good. It consists of a flat surface with a ruler attached. Place the text to be scanned in a narrow window in the ruler, one line at a time, and track the scanner along it while holding down the scan button. The Omnisreader acts as a modem, with baud rates from 300 to 9600, so anything it reads should be receivable with the relevant communications software.

Now the problems. You can only scan one line at a time, and type size and spacing is quite critical, so some text just won't scan. If the device were a lot more expensive it would use stepper motors to take the scanner across the paper at a constant speed, but as it doesn't you need to have a steady hand.

The net result is that you'll only get a completely accurate representation of a line under optimum conditions, and quite often you'll find you have to try a line two or three times before you get it right. You can get the text across into digital form,

but you can find that it's taking you as long - or longer - than it would just to retype it. And once you have got it in you'll probably have to run it through a spelling checker and debug it.

Does it any use? The obvious answer is "did Oberon go bankrupt?" but at £49 - or, £99 - it seems to look like an interesting deal, if not a good one. If you seriously think you can do a useful file transfer job on it go and hold your breath a bucket of ice cold water until you feel better, but if you're interested in the technology and want to experiment it really is excellent value.

The Joyball - no jolts please

to totally spaced out

upon Game Engineering both the design and colour appeal ... this forum can respond to your adventurous spirit! Whatever that means, it's right.

The Joyball has four fire buttons, two of which are normal and two of which are analogue. The analogue side can be switched from 7-5 to 10 skins per second using a slider switch between the ball and the fire buttons.

The increased comfort of the large ball, as opposed to a slim handle, comes into its own because you need only hold the ball loosely, your hand does not become tired so quickly.

Operating the Joyball takes some get-

ting used to, since it involves learning a whole new set of reactions. However, tried out on a whole range of fast moving arcade games, including *Golden and Silver Armour of Atlantis*, it proved increasingly effective with practice. Certainly one to try out if you want to get one up on the neighbours.

Programming: QL

All Sorts

Abstract / Introduction

Sorting routines are an essential feature of many computer programs and a great deal of time and effort is expended developing more efficient sorting algorithms. One of the fastest, the Quicksort, is recursive and therefore cannot properly be implemented on most home computers. Although this is no drawback to the QL it is not particularly popular because the procedure listing is lengthy and recursion is relatively slow and uses large amounts of RAM.

To provide an efficient but non-resource-sucking routine for the CI, I have developed a variation of the ripple sort technique which could easily be converted to most other basic sorts.

During sorting, most time is wasted shuffling values into and out of the array. Napier wants to reduce this shuffling by keeping a value in a temporary store until the correct position in the list is found for it. This means that the routine makes only a single pass through the array. My variation helps in finding the correct

relating to the specific subject of the report.

The quickest way of finding the correct place for a value within a sorted list is to divide the list in half and test to see which half should hold the target value. That portion of the list is then divided into two and the test repeated until the actual position is found. This is known as a binary search.

The **MiddleSort** takes the first unsorted item in the array as its target value. The array elements before it are in the list and those which have been sorted into order and this area of the array is termed using the binary search method to determine where the target value is to be placed. The target value is removed to a temporary variable, thus creating a space in the array. The array elements between the target value's old position and its destination are shifted down one space. The target value is then moved from the temporary variable into its space, giving

Microsoft works without validation on arrays of any variable type (integer, string or real number). This will not be possible on other computers and an appropriate variable type for strings will need to be used. Conversion should also take into account the SuperBasic function Date() which returns the number of elements in an array.

Joystick Test

Figure 1

The following program for the Commodore 64, or C128 in C64 mode, allows you to test the joystick port. To use software it is essential, obviously,

Also, by examining the bit status of the memory location 56321 which is displayed on the screen you can determine which values relate to which joystick movements.

Championship Bowls

Coin Speed

Championship Bowls is an all-machine-code, loan-drive game for two players. The object, as I'm sure you're well aware after the bowls on the TV recently, is to finish an end with your bowling closest to the jack.

The game supports a variety of joysticks or the keyboard can be used as follows:

Left = 0.17, $p = 0$

On with the instructions for this ABC/Therapy contract.

7 allows the inputting of formulae. It takes the form of "A4 + 0?" (see an example). The procedure will handle any formula using $\sqrt{\quad}$, $\frac{\quad}{\quad}$. To save typing out things like $A1+A2+A3+\dots+A10$ you can use "A1:A10".

F displays the formula contained in the current cell position. If any.

U. Kopp and M. Kopp

1999: 100–101, 103–104, 106–107, 109–110, 112–113, 115–116, 118–119, 121–122, 124–125, 127–128, 130–131, 133–134, 136–137, 139–140, 142–143, 145–146, 148–149, 151–152, 154–155, 157–158, 160–161, 163–164, 166–167, 169–170, 172–173, 175–176, 178–179, 181–182, 184–185, 187–188, 190–191, 193–194, 196–197, 199–200, 202–203, 205–206, 208–209, 211–212, 214–215, 217–218, 220–221, 223–224, 226–227, 229–230, 232–233, 235–236, 238–239, 241–242, 244–245, 247–248, 250–251, 253–254, 256–257, 259–260, 262–263, 265–266, 268–269, 271–272, 274–275, 277–278, 280–281, 283–284, 286–287, 289–290, 292–293, 295–296, 298–299, 301–302, 304–305, 307–308, 310–311, 313–314, 316–317, 319–320, 322–323, 325–326, 328–329, 331–332, 334–335, 337–338, 340–341, 343–344, 346–347, 349–350, 352–353, 355–356, 358–359, 361–362, 364–365, 367–368, 370–371, 373–374, 376–377, 379–380, 382–383, 385–386, 388–389, 391–392, 394–395, 397–398, 400–401, 403–404, 406–407, 409–410, 412–413, 415–416, 418–419, 421–422, 424–425, 427–428, 430–431, 433–434, 436–437, 439–440, 442–443, 445–446, 448–449, 451–452, 454–455, 457–458, 460–461, 463–464, 466–467, 469–470, 472–473, 475–476, 478–479, 481–482, 484–485, 487–488, 490–491, 493–494, 496–497, 499–500, 502–503, 505–506, 508–509, 511–512, 514–515, 517–518, 520–521, 523–524, 526–527, 529–530, 532–533, 535–536, 538–539, 541–542, 544–545, 547–548, 550–551, 553–554, 556–557, 559–560, 562–563, 565–566, 568–569, 571–572, 574–575, 577–578, 580–581, 583–584, 586–587, 589–590, 592–593, 595–596, 598–599, 601–602, 604–605, 607–608, 610–611, 613–614, 616–617, 619–620, 622–623, 625–626, 628–629, 631–632, 634–635, 637–638, 640–641, 643–644, 646–647, 649–650, 652–653, 655–656, 658–659, 661–662, 664–665, 667–668, 670–671, 673–674, 676–677, 679–680, 682–683, 685–686, 688–689, 691–692, 694–695, 697–698, 700–701, 703–704, 706–707, 709–710, 712–713, 715–716, 718–719, 721–722, 724–725, 727–728, 730–731, 733–734, 736–737, 739–740, 742–743, 745–746, 748–749, 751–752, 754–755, 757–758, 760–761, 763–764, 766–767, 769–770, 772–773, 775–776, 778–779, 781–782, 784–785, 787–788, 790–791, 793–794, 796–797, 799–800, 802–803, 805–806, 808–809, 811–812, 814–815, 817–818, 820–821, 823–824, 826–827, 829–830, 832–833, 835–836, 838–839, 841–842, 844–845, 847–848, 850–851, 853–854, 856–857, 859–860, 862–863, 865–866, 868–869, 871–872, 874–875, 877–878, 880–881, 883–884, 886–887, 889–890, 892–893, 895–896, 898–899, 901–902, 904–905, 907–908, 910–911, 913–914, 916–917, 919–920, 922–923, 925–926, 928–929, 931–932, 934–935, 937–938, 940–941, 943–944, 946–947, 949–950, 952–953, 955–956, 958–959, 961–962, 964–965, 967–968, 970–971, 973–974, 976–977, 979–980, 982–983, 985–986, 988–989, 991–992, 994–995, 997–998, 1000–1001, 1003–1004, 1006–1007, 1009–1010, 1012–1013, 1015–1016, 1018–1019, 1021–1022, 1024–1025, 1027–1028, 1030–1031, 1033–1034, 1036–1037, 1039–1040, 1042–1043, 1045–1046, 1048–1049, 1051–1052, 1054–1055, 1057–1058, 1060–1061, 1063–1064, 1066–1067, 1069–1070, 1072–1073, 1075–1076, 1078–1079, 1081–1082, 1084–1085, 1087–1088, 1090–1091, 1093–1094, 1096–1097, 1099–1100, 1102–1103, 1105–1106, 1108–1109, 1111–1112, 1114–1115, 1117–1118, 1120–1121, 1123–1124, 1126–1127, 1129–1130, 1132–1133, 1135–1136, 1138–1139, 1141–1142, 1144–1145, 1147–1148, 1150–1151, 1153–1154, 1156–1157, 1159–1160, 1162–1163, 1165–1166, 1168–1169, 1171–1172, 1174–1175, 1177–1178, 1180–1181, 1183–1184, 1186–1187, 1189–1190, 1192–1193, 1195–1196, 1198–1199, 1201–1202, 1204–1205, 1207–1208, 1210–1211, 1213–1214, 1216–1217, 1219–1220, 1222–1223, 1225–1226, 1228–1229, 1231–1232, 1234–1235, 1237–1238, 1240–1241, 1243–1244, 1246–1247, 1249–1250, 1252–1253, 1255–1256, 1258–1259, 1261–1262, 1264–1265, 1267–1268, 1270–1271, 1273–1274, 1276–1277, 1279–1280, 1282–1283, 1285–1286, 1288–1289, 1291–1292, 1294–1295, 1297–1298, 1300–1301, 1303–1304, 1306–1307, 1309–1310, 1312–1313, 1315–1316, 1318–1319, 1321–1322, 1324–1325, 1327–1328, 1330–1331, 1333–1334, 1336–1337, 1339–1340, 1342–1343, 1345–1346, 1348–1349, 1351–1352, 1354–1355, 1357–1358, 1360–1361, 1363–1364, 1366–1367, 1369–1370, 1372–1373, 1375–1376, 13

Law 1 (2002) No. 27, *Journal Officiel* (2002) 10, 1037.

“*After 12*” declares and marks the page respectively. The former type goes direct to the corresponding scene.

¹² *See* *United States v. Galt*, 199 F.3d 1008, 1012 (9th Cir. 2000) (quoting *United States v. Williams*, 199 F.3d 1008, 1012 (9th Cir. 2000)).

20. *transcriptase*, *transcription*, *translational*, *transmembrane*

to suggest that the new values to add to flag and ordering new values should also

③ puts a copy of the current formula into a buffer for use with the action

Downloaded At: 11:53 11 September 2009

'Copy' copies the buffer contents to a cell. Row changes and column changes are automatically compensated for.

The program is error trapped and creates no drastic decisions.

Pine Tree Generator

D. C. Alvord

This OJ procedure prints a pine tree at a given position (x,y) and of a given height (h) on the screen.

The procedure may be used within a loop putting random values into these parameters to produce landscapes of trees. Screens like this may be useful in games or other programs requiring colorful graphics.

Quick Sort

J. F. Markiewicz

This sorting program was written on an Atari 512 but will work on other computers with very little modification. The variables are as follows:

A=Outer loop, B=inner loop, C=Array containing numbers to be sorted, L=Upper limit of array, T=Temporary variable and M=Position of top value of array in B loop.

```

10 FOR A = 1 TO L
20 M = A
30 FOR B = A TO L
40 IF C(B) > C(M) THEN M = B
50 NEXT B
60 T = C(M), C(M) = C(A), C(A) = T
70 NEXT A

```

**Triumph
Adler Dump**

DOI: 10.1002/anie

The procedure for the G2 allows a screen to be printed on the Triumph-Adler daisy-wheel printer operating in graphics mode.

The routine assumes that the printer is connected using a standard serial to parallel Centronics interface operating at 9600 baud.

The programme takes approximately 10 minutes to run.

Graphic confusion

At Michaelson of Billingsdale, Harris, writes:

Q I have been programming my C64 for about six months now, and am still a little confused about the high res graphics modes, particularly, Bit Mapped Multi Colour mode. What I don't understand is where these colours are kept, and how they are represented on the screen. Could you help?

A Bit Mapped Multi Colour mode on the Commodore 64 is about the most common graphics mode used since it allows four different colours to be used per character square. To set it up, choose where you want your VIC RAM bank to be, e.g. 0, 1, 2 or 3 and POKE \$6576 to select it, for example POKE \$6576,3 to select bank 3 starting at 16384. Next, set bitmap mode with POKE \$3298, POKE \$3299 OR 32 and initialise mode with POKE \$3270, POKE \$3270 OR 16. Position the bitmap, and lower colour map with POKE \$3272, 121, this starts the bitmap at \$8000 (it denotes hexadecimal notation) and the lower colour map at \$5C00.

The screen resolution in this mode is 160x250 with two bits defining one of four colours in the following way:

- 00 Background colour in \$5C01 0-15
- 01 16 shades in lower colour RAM \$5C08
- 10 16 shades of lower colour RAM \$5C08
- 11 16 shades of high colour RAM \$5C09

Each of the colour RAM contains 1000 bytes each, each byte setting the colour of a 64x64 block of pixels in the bitmap depending on the bits as above. The bitmap is set up as follows:

Each byte contains 4 sets of 2 bits so taking the top left most pixel on the screen, the colour is set with \$00000000 where XX can be 00, 01, 10, or 11 each pair relating to a specific colour. The next pixel to the right is set with 00000000, the third with 00000000 and the fourth with 00000000. So, to set the second pixel from the left, in the top row, to the colour specified in \$5C08 (\$5C00) POKE 24576, (\$5C08) OR 01. So the bits to set. The bitmap itself is set up in the following way:

Row contents	Row contents
0 00000000 00 00 00000000	0 00000000 00 00 00000000
1 00000000 00 00 00000000	1 00000000 00 00 00000000
2 00000000 00 00 00000000	2 00000000 00 00 00000000
3 00000000 00 00 00000000	3 00000000 00 00 00000000
4 00000000 00 00 00000000	4 00000000 00 00 00000000
5 00000000 00 00 00000000	5 00000000 00 00 00000000
6 00000000 00 00 00000000	6 00000000 00 00 00000000
7 00000000 00 00 00000000	7 00000000 00 00 00000000

and so on for 40 columns in 327 lines and then for 25 lines.

Hence the screen image is made up from 40x25 blocks of eight bytes, each defining 32 pixels hence 32000 pixels or 160x320. To find the location of a specific byte given its X,Y coordinates use the following formula:

Memory=(INT(Y/24)*320)+(Y-(INT(Y/24)*24))

This is the offset from the start of the screen so to get the address in memory, add the bitmap start address \$8000 (24576).

Once the particular byte is found, the bit pair needed to set the colour are found with $80-X-807(X/4)/4$ but remember that these are in reverse order, so it:

80-X then bits are 0,0,1,10,101
 80-X then bits are 0,1,0,1,0,1
 80-X then bits are 0,1,0,1,0,1
 80-X then bits are 0,1,0,1,0,1

To actually plot points, you will need to read the memory location address, AND with 255-102,4,12 or 3) and then OR with the appropriate bits. The AND is needed to zero any bits that might be set in the port.

But the colours are

limited to 4 per 4x4 square with the background colour being the same all over the screen. So if you POKE 24576,258 (11 10 01 00) and then POKE \$3281,0 POKE 32842,1*16+2 POKE \$6298,3 you should see from the left, the colours cyan, red, white and black.

Colourful Commodore

J Allen of Blackpool, Lancs, writes:

Q I have a Commodore 1281 colour monitor and I would like to connect it to my video recorder to get a good picture. I have tried connecting the video output to the Lum input and get a black and white picture. How can I get colour, and is the sound input compatible with the video recorder's output?

A The 1281 has separate inputs for colour and brightness, video recorders send out their signal as composite colour and brightness. All you need to do to get colour is connect the video signal to both colour and Lum inputs at once.

The sound input for the monitor is compatible with the 16-18 IBD standard so if your video has the same output, and most of them do, then you will be able to connect the sound output directly to the monitor input.

Happy viewing!

Colour blindness

Kathy Pate of Billingham, Cleveland, writes:

Q I own a CPC464 and am trying to connect it to a Ferguson TX RGB TV/Monitor. Although this is easily done with a ready made lead, the full range of colours are unavailable - only 8 out of the 26. Is it possible to connect and get the full range of colours with this monitor, and if so how?

A It sounds as though the cable may be wired up wrongly. The Amstrad

RGB is as far as I know, standard. Check that the Lum pin has been connected, if there is one on the TX, if not then this may be the cause of the trouble.

Alternatively, there are two types of RGB signal, linear and non-linear, it may be that the TX is expecting the opposite to that which the Amstrad puts out if this is the case, there is no way you will get all the colours from the Amstrad onto the TX.

How to do pokes

Cain Robertson of London E2, writes:

Q Can you explain to me how you write "Pokes" for games?

A I presume you mean cheat pokes, inserting different numbers into the code to get more lives, higher scores, immunity from death and so on.

I've only ever done it for a few games and then, to a certain extent, by trial and error. How it is done depends on the machine and how well the game is protected.

First of all, you really need to look at the code, and work out what it does, write you are doing this, you will generally find that messages such as "You lose sucker" can be located. These can be edited and personalised quite easily, by finding their absolute location in memory when the game is loaded, and then overwriting with the new text. Once the new version is in, run the game by setting (call this print up) the address of the start of the game.

Altering other systems of the game calls for a little more knowledge of machine code plus a disassembler. Again, depending on the machine, the start address of the game can be found, from the header on the tape, or by looking at the system load address memory location, after the game has been loaded, but not run. Start disassembling from here and you should find that the setup routines that define things like the number of lives can be found. If you look at where the data for lives is loaded from, you can then alter it so that when the game is run, you live longer.

Midi Master for your Atari blaster

Mark Jenkins brings news of a new music package for the Atari and Commodore ranges

It's good to see some of the simpler micros being supported by powerful music software, and the 2-Bit Systems **Midi Master** fills the bill for the Atari 800/800X/130XE micros (with 49k memory). It's a hardware/software package, but the hardware is very simple — a multi-pin plug for the Atari's serial disc drive socket, leading to a pair of Din plugs marked I and O (for Midi In and Out).

And the software comprises two discs (or one tape), one for the sequencing system and one for examples. **Midi** is played via **Midi**, so you'll need appropriate synthesizers — the software plays up to eight monophonic tracks, so two Casio CZ101s in solo mode will fit the bill admirably. We seem to keep returning to the CZ101s, but for the past 18 months or so it has been by far the most practical way in to **Midi** synthesis, offering powerful eight-note chords or four different monophonic sounds simultaneously for around £240.

So the software is in effect a self-sufficient real-time eight-track sequencer or composer, but it's also useful for owners of the Atari/Atari Commodore cartridge or the disc version of the **Advanced Music System**, since the demo programs included can play tunes from these packages over **Midi**, either polyphonically over a single **Midi** channel or monophonically on four different channels simultaneously (which really covers the two options offered by the CZ101).

The package also offers two sound editors for the CZ101 and for the budget Yamaha DX100, which in some ways sounds more powerful although it doesn't have the four-voice multitrack playing option. These allow you to create new sounds and store them to disc or tape, which is a valuable option since both keyboards rely on single data entry sliders for editing and neither has a very informative LCD display.

The main music screen of **Midi Master** is divided into a status line at the top showing memory remaining and metronome time, and the status block, which has a section for each of the eight tracks. The Metronome gives audible clicks between 0's and 3's apart; you can double the metronome by setting its speed to zero; and the eight-track sections each have the following parameters:

Rec — enable recording and set **Midi** channel from one to 16.

Play — enable play and select **Midi** channel.

Page — transmit a memory number from zero to 127 over **Midi** before play commences. You have to take into account that some synths number patches from 00, others from 01, and others from 11 to 99 in banks of eight.

Trp — transpose pitch of track in semitones, plus or minus 99.

Rep — number of repetitions of a track.

Delay — delay lead-in time of a track in 100ths of a second to compensate for delays in long chains of **Midi** instruments.

Gap — control time interval between repetitions of a track.

The S, L, W, R, F and T keys control **Save**, **Load**, **Wipe** (erase a single track), **Play**, **Record** (one or more tracks simultaneously with an eight-beat counter) if the metronome is enabled and **Time** (set the notes of any track by tapping out the new rhythm on this key).

As you can imagine, **Midi Master** is very easy to use, but since there are no facilities for advanced composition such as track copying, string editing or step time entry of complex phrases, it could become limiting. I don't have much idea of the total capacity — but then, my copy of **Midi Master** suddenly refused to load, so don't expect any deeply considered opinions on this point.

2-Bit itself describes the playback facilities for **Music Composer** and **Advanced Music System** files as having some limitations, mainly due to the fact that a lot of effects on these packages are created by repeating notes and envelopes, which doesn't have the same effect over **Midi**. Future versions are likely to support velocity recording and to cope with the more tractable **Real Street Music Writer** and **Activision Music Studio** packages.

As for the patch editing facilities — well obviously these will only be of any interest to you if you already have a CZ101 (or 1000, 2000, 5000 or 2200, which can only be edited via **Midi**) or a DX100 (or 21 or 27). The Casio version consists of a single table of parameters which are altered using the cursor keys which move an orange block around the screen, and the DX version transfers sounds to the micro and exports you to edit the new **Midi** parameter data. A valuable facility though, with CZ storage cartridges being very expensive and the

DX100 saving only onto boring old cassette.

2-Bit also has a package called **Permutation Master** at £29.95, and this will allow you to load and play up to nine eight-bit samples through a hi-fi or other amplifier and string them into 32 patterns of between four and 32 beats. It's three-chord polyphonic, which means that you can have a hi-hat occurring on a beat which is already occupied by a bass and a snare, for instance.

Midi Master is £37.50 by mail from 2-Bit Systems, 44 Marcom Road, Dunstable LU8 4EG.

Existing news from Steinberg, which has completely re-organised its range of computer music products and introduced several new items and updates.

The **Pro-24** package (£195) for the Atari 5200/1300/1301, which allows you to compose 24 channels of polyphonic **Midi** information, is now capable of reading the SMPTE code used to synchronise music to film and video. Steinberg have recently introduced a SMPTE code generator which connects to the micro's RS232 port — it will be around £90.

Also on the Atari front, a music notation/sequencer program, and a visual editing package for the Akai S990 sound sampler, which is becoming very popular (due November/December, prices to be announced). The latter package will include the ability to convert SRCO files to Prophet 2000/2001 files, which is good news for owners of either sampler (ensuring they want to patch each other's sounds!).

For the Commodore, Steinberg has re-packaged the **Pro-16** composer on a cartridge so you don't have to load the software from disc at the start of each session. **Pro-105** is £239 and has syn-to-tape and graphic editing capabilities, and **Pro-16 Plus** at £299 also has a scorewriting function.

On disc, the range now includes editors and sound library packages for the budget Roland Alpha Juno 102 (JUNO-£80), and for the powerful Rang DAWOOD (Dirt - £89). The basic Commodore **Midi** interface is £55, the XT version with syn-to-tape is £160.

Steinberg Research, The Spentlove Centre, Chalfont, Oxford OX7 3PG. Tel: 0493 811325.

All aboard for Ireland

A new board for Ireland, an ST special, and answers to readers' queries from David Wallin

Lots more letters to answer this week; to start off with, queries about new boards. The first board is called Dubbs, and going by its specifications, it's some sort of super-board. Dubbs is the only board I know of that runs in the Republic of Ireland and the sysop (Stephen Kearon) says it is the first.

Thus, claims Stephen, has attracted a good deal of interest in the board, which has resulted in Miracle Technology donating a V220s W630000 modem (one of the top modems available, and is in the same range as Pace's Series 4).

This sounds like a good deal to get started with, until you hear which computer was donated: a Commodore Amiga, with three 3½ inch drives and hard disc promised soon. The Amiga was donated by the Commodore's World Group in Dublin.

Sounds a good board (it certainly ought to be!), so why not give it a ring on Dublin 664634 (a ring Dubbs from within the UK, dial 0901 (tweaked)? The hours are 9pm till 8am, Monday to Friday, and 24 hours at the weekend. Speeds of access are just about all the ones you can think of: 300/300, 1200/75, 1200/1200 and 2400/2400 (and if a couple missing like 75/1200 and 600/600 but hardly anyone uses these speeds); come to think of it, who uses 2400/2400 bauds. The modems cost a fortune — in excess of £500. The format of the speed (ie, Baud or CDTT, not data protocol) was not stated so CDTT will work, but I think the W630000 is a Bell modem as well, and Bell bauds may work. The data protocol packet length, start bits and stop bits is either BN1 (standard BN) or 761 (Vineyard) — Pirelli and Commanal boards, automatically detected on ring in. Some Vineyard terminal software does not allow any sort of scrolling, and these won't work — if you're not sure about your software, give Dubbs a try and find out.

Now for some details on the board called ACS BBS, sponsored by Atlas Computer Supplies. It is aimed particu-

"ACS BBS has a competition Sig which donates any money it generates to charity. It is the first board I know of to do this, and it is aimed particularly at ST users"

larly in ST users and this is reflected in particular by free downloads for the ST and an ST programming Sig which contains most of the source codes for the finished programs.

The sysop, Paul Camilleri, who runs the board on behalf of Atlas Computer Supplies, feels that there are a lot of ST users out there with communications software and hardware who are just waiting for and need a BBS of this sort. It also has a competition Sig which donates any money it generates to charity, and the first board I know of to do this. Personally I think it's a good thing. One thing that may be of interest is the sysop's Telexcom Gold mailbox number, which is 721MAG00403.

The speeds are V21/V23, 300/300 or 1200/75, with an BN1 protocol (standard BS protocol). It's online from 10pm till 8am, seven days a week. Lastly, the phone number: 01-661 6967. Although I said the board seems to be aimed at ST users, you can log on without an ST if you want.

Next on to a problem. Mike Westgate of Berks, has E-Mailed me telling of his problem concerning using Joyce's scores Vineyard systems. He says that Sage Soft's Chi-Chi Club doesn't handle colour text and backgrounds very well, and when the two are encountered on one frame its content is hidden. Try phoning Sage Soft, Mike, and ask its technical staff for help, as you can give them a detailed description of what's happening and they may have some ideas.

If not, secondly you could try a different piece of software: I can recommend Camex from Modern House. The big difference you will notice between Camex's vineyard screens and Chi-Chi's is the Camex's are 40 columns and take up just under half of the screen, whereas Chi-Chi uses the full screen.

I cannot guarantee that Camex will not have the same problem, but I have never encountered it either with Camex or Chi-Chi. Contacting Margalis, which wrote Camex, may give you a guarantee or at least some help. As to whether or not it will happen, Margalis' address is 105 Foundling Court, Brunswick Centre, Manchester Street, London WC1N 1AN. I've no phone number for them, I'm afraid.

The next problem is from Bob Macmillan, simply asking for help or advice with the VTX 7-11 package, especially on 300/300 baud, as he appears to have problems. If anyone out there has any possible answers, then phone Prometheus (the board with my communications section) and select number eight from the main menu and leave the answer; it will be put up on the board where Bob can see it. Prometheus is a Vineyard board and the number is 01-300 7177. If you don't have a Vineyard emulator on your software then either E-Mail or post mail me and I'll make sure Bob sees it. I'll also print any advice on the VTX 7-11 in the magazine as well.

One quick question, from Dave — left on Prometheus with no surname, is 300/300 available on a VTX 5000? Well, I'm not sure, but I've heard people talk about this a lot and I think it is possible to get 300/300 on the VTX 5000 somewhere. If anyone out there has done so, or knows how to, please let me know as I think others would also like to know.

Mike Morris wants to know of Amstrad speciality boards. Well, there's Ros PCW for Amstrad PCW 6258 owners, the number for Ros is 0902-788663 at 300/300 baud. There are others, and I'll let you know of them in a week or two, when I've sorted some out.

John Cook looks through this week's new arrivals

Amstrad CPCs

Program Road Type Graphic adventure **Price** £9.99
Micro All CPCs **Supplier** Melbourne House, 60 High Street, Hampton Wick, Kingston Upon Thames, Surrey KT1 4BB.

Program Back to Reality Type Arcade **Price** £1.99
Micro All CPCs **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program 208 Type Arcade **Price** £2.99 **Micro** All CPCs **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program Arcadia Type Adventure **Price** £1.99 **Micro** All CPCs **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program 1042 Type Arcade/simulation **Price** £9.95 cassette, £14.95 disc **Micro** All CPCs **Supplier** Elite Systems, Anchor House, Anchor Road, Aldridge, Walsall W69 8PW.

Program Infinitor Type Arcade/simulation **Price** £9.95 **Micro** All CPCs **Supplier** US Gold, Unit 2 and 3, Holford Way, Holford, Birmingham B8 7AX.

Atari XL/XE

Program Crystal Raider Type Arcade **Price** £1.99 **Micro** Atari 8-bits **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program Asat Smash Hit Volume 5 Type Compilation **Price** £9.95 twin cassette, £14.95 twin disc **Micro** Atari 400/800/XL/XE **Supplier** English Software, 1 North Parade, Paternoster Gardens, Manchester M60 1BX.

Atari ST

Program Strip Poker Type Simulation **Price** £19.95 **Micro** Atari ST **Supplier** Arco, 35 West Hill, Dorking, Kent DA1 1PB.

Program Smash Hit Type Simulation **Price** £24.99 **Micro** Atari ST **Supplier** US Gold, Unit 2 and 3, Holford Way, Holford, Birmingham B8 7AX.

Program Jewels of Darkness Type Adventure **Price** £19.95 **Micro** Atari ST **Supplier** Bandai, 34 New Oxford Street, London WC1A 1PS.

Having been converted to virtually every other format the Level 9 Rainbow package, *Jewels of Darkness*, has now been released for the Atari ST. Unfortunately, despite Bandai's claims, the graphics in the adventures have not been improved from the versions for eight-bit machines. In fact, they are probably the worst illustrations I can recall on any graphic adventure for the ST.

Still, in the ST market, £20 for three good adventures represents excellent value for money.

Commodore 16/Plus 4

Program One Type Arcade **Price** £1.99 **Micro** C16/Plus4 **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program Bridgetown Type Arcade **Price** £9.95 **Micro** C16/Plus4 **Supplier** Arco, 35 West Hill, Dorking, Kent DA1 1PB.

No holds barred

Whatever you care to call them - Dungeon's & Dragon's, role playing games - programs like *The Bard* have been around almost as long as the microcomputer itself.

But *The Bard* is more than the sum of its parts. The game universe has been well thought out, lots of magic, character classes, attributes and weapons, lots of graphics and some good sound effects.

There are some highly original touches too. For example, the game is named for the top player in your adventuring party, the bard himself. The bard waxes about by playing and singing magical tunes. But when his throat gets dry, you'll have to run for the nearest tavern and get some ale down him.

There's plenty of exploring

for map-freaks, loads of atmosphere for adventuring types, and buckets of blood for barbarous hack 'n' slayers.

The only thing to be said against it is that it's completely disc based, so not only do you need a drive but your patience as well, because certain scenes involve a fair bit of disc access.

But this is a minor quibble. *The Bard* looks destined to be a classic. Watch out for a full review next week.

Program The Bard's Tale Type Role playing adventure **Price** £14.95 disc only **Micro** Commodore 64/128 **Supplier** Avalonsoft, Long Acre, London WC2.

Commodore 64/128

Program Arcad Type Graphic adventure **Price** £9.95 **Micro** Commodore 64 **Supplier** Melbourne House, 60 High Street, Hampton Wick, Kingston Upon Thames, Surrey KT1 4BB.

Program Back to Reality Type Arcade **Price** £1.99 **Micro** Commodore 64 **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program 1042 Type Arcade/simulation **Price** £9.95 cassette, £14.95 disc **Micro** Commodore 64 **Supplier** Elite Systems, Anchor House, Anchor Road, Aldridge, Walsall W69 8PW.

Program Computer Atto 10 Volume 3 Type Compilation **Price** £9.95 **Micro** Commodore 64/128 **Supplier** Basic Jells, 29A, Bell Street, Reigate, Surrey.

Program Captured Type Arcade Adventure **Price** £9.95 cassette, £14.95 disc **Micro** Commodore 64/128 **Supplier** American Action, Box 10090, 200-43, Sweden.

The Swedes have no great reputation in the software market and looking at *Captured* from American Action it's not hard to see why.

Captured is a platform game with over 100 screens to try your patience. It has everything every other platform game has, moving bits, sprites and things and also some smart bombs which clear all the bad blobs off the screen. The graphics are staggeringly unoriginal and a marvellous little tune accompanies the whole diabolical affair.

Animation of your sprite is smooth enough but turning around is slow, usually really slow. If you're a platform game junkie then here's another one to consider. For me, this program totally failed to capture my interest.

Program ZUG Type Arcade
Price £2.99 Micro Commodore 64 **Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program World Games Type Simulation Price £19.99 cassette, £14.99 also **Micro Commodore 64 Supplier** US Gold, Unit 2 and 3, Holford Way, Holford, Birmingham B67 7AX.

Commodore Amiga

Program Jewels of Darkness Type Adventure Price £18.99 **Micro Amiga Supplier** Harford, 14 New Oxford Street, London WC1A 1PS.

IBM PC Compatibles

Program Darkstone Type Simulation Price £19.99 **Micro IBM and compatibles Supplier** US Gold, Unit 2 and 3, Holford Way, Holford, Birmingham B67 7AX.

Program Drac'On Type Simulation Price £19.99 **Micro IBM and compatibles Supplier** US Gold, Unit 2 and 3, Holford, Birmingham B67 7AX.

Program World Games Type Simulation Price £24.99 **Micro IBM and compatibles Supplier** Epyco/US Gold Unit 2 and 3, Holford Way, Holford, Birmingham B67 7AX.

Spectrum

Program ZUG Type Arcade Price £2.99 **Micro Spectrum 48/128 Supplier** Mastertronic, 8-10 Paul Street, London EC2.

Program Prehistoric Adventure Type Text adventure Price £19.99 **Micro Spectrum 48k Supplier** Crusader Computing, 18 Hester Wood Road, Enley, Huntingdon RG5 2DE.

Straightforward text adventures, still not a glaze in the hearts of many adventurers - "The atmosphere created by text is much more evocative than some rather primitive pictures", is the most commonly heard quote from the traditionalists.

Unfortunately "atmosphere created by text" all too often means sub-Tolkien prose, rather than rich evocative description.

Prehistoric Adventure written by a new company, Crusader Computing, does rather fall into this trap: alternative 'old world' screen font, and 'the Gold Adventurer heads westward knowing that he alone can save the Old Man here'.

However, for the text adventure fan it may well be worth a look. Set around Stonehenge, in a world populated by dinosaurs, and other prehistoric animals, your quest is to find and bring back the legendary Ananasis fruit from a distant island in order to break an evil of life.

The game accepts two words per move of a verb-noun format only, which in these days of Infocom and Level 9 scenarios is a bit limiting. Apart from the prehistoric animals, I doubt there's anything remarkably novel about the adventure, but I suspect it'll have your brain working in overdrive if you get into it.

Oh yes, and there's a free glossy wall chart depicting various Stone Age animals - clear a space on your bedroom wall now!

Program Jewels of Darkness Type Fantasy (adventure) Price £7.99 **Micro Spectrum 48k, with expanded 128k version Supplier** US, 14 Langton Way, London N23 7TL.

Don't all about it since if I'm wrong, but I think that this is the first strategic computer game with a fantasy scenario. You control a unit of the Imperial guards, sent out to quell an invasion of monsters. After selecting your team from the various wizards and warriors available, you proceed to battle, using either joystick or keyboard to position your forces.

There are two versions of the game on the cassette; the 128k version contains three scenarios rather than one, and has a larger playing area.

The map graphics are clear and colourful, and the strategy involved in manoeuvring your wizards and warriors to defeat the enemy is considerable. Movement points, weapon ranges, and all the usual paraphernalia of strategy games are included.

Jewels of Darkness deserves a look by fantasy fans and strategists alike; note though that there is no two player option; the little demon living in your computer is the only opponent available.

A musical carthorse

I remember when I first acquired a home computer, and would continually sound off about its talents and skills to all available friends and relations. My sister-in-law asked, "But could it do the Guardian crossword?" (She can, you see, with devastating speed, so uses this as a benchmark of smartness.)

I pondered for a while and said, "I think it could do anagrams." In fact this became my first real programming project (and one I recommend to computer novices). I struggled with problems of string-shifting and permutation for a good while before I came up with some elegant Basic that managed to print all the possible anagrams of a given word.

Even as I congratulated myself, though, I realised that the program would be little use to a crossword-solver. Input a three-letter word, and the six possible variations would come starrily on-screen. Input four letters, and the 24 permutations would print up most efficiently. But nobody whose IQ much exceeds their shoe-size has great trouble with four-letter anagrams.

A five-letter input puts you to the bother of sorting through 120 possible anagrams, and six letters (when anagrams are only beginning to become tricky) produces 720 permutations. Seven letters multiply those

possibilities by seven - to 5040. And should you be seeking a musical version of 'carthorse', you'd find the elegant answer 'orchestra' hidden among 362,880 combinations that those nine letters could transform to.

My sister-in-law could finish off several whole puzzles (including a couple of alphabetical jigsaws) before any human could read through all that monstrous list. So perhaps we should make the computer read it, matching each permutation against a dictionary until it finds one that makes English sense. Maybe, but that sort of brute-force solution seems very clumsy.

The reason for that is it's emphatically not the way that human anagram solvers work. I presented some twelve-year-olds with 'Old Meel ariser' and one took only three minutes to find the answer ('Older Meelard', of course). His mind certainly hadn't rolled methodically through the six thousand earlier (conceivably) possible combinations of those 12 letters.

How he did it is probably a mystery to him. Most of us find that at one moment the letters seem intractable, the next the answer is obvious. Possible syllables shift about in our minds, as we use our sense of the way words work and instinctively ignore most of the non-starters ('bedwetter', 'self-defactor', 'al-

weather'...). I that my simple-minded computer program wastes so much time on.

G Douglas R Hofstadter (the *Gödel, Escher, Bach* author who has just thought about Artificial Intelligence using in many interesting and unexpected directions) has written: "The anagrams problem is one that exemplifies repudiations of thought that AI people have not explored."

"How do these letters swirl among one another, fluidly and harmoniously making and breaking alliances? Glomming together, then coming apart, shiver like little biological objects in a cell... It is obviously more related to creativity and spontaneity than it is to logical derivations. But that does not make it - or the mode of thinking that it represents - any less worthy of attention."

A program that could embody one's sense of English word-structures, that could find likely syllables and try to tack them on to others, could discriminate between promising and unpromising combinations of letters, could loop from a central syllable to a sense of the entire word, and above all could recognise a satisfying solution when it found one - that would be a real step towards Artificial Intelligence. I wonder how it'd compete with my sister-in-law?

George Simmons

NEXT WEEK

SPECIAL SUPPLEMENT

Buyers guide to peripherals

Over the next three weeks *Pravda* will be publishing comprehensive guides to the best buys in peripherals, editors and software.

By the end of the series, your Christmas list (yes, it's nearly that time of year again) should be complete, and you can rest secure in the knowledge that there will be no excuse for getting left presents this time.

Next week it's peripherals. All you ever wanted to know about the choice of printers, mice, monitors, and modems in the market, the best and brightest value for money add-ons we could find.

Fairlight

Chronicles of the Land of Fairlight
2. Trail of Darkness

The Epic continues...

Fairlight 1 (The Light Revealed) won'ted virtually every award last year. None in this second part of the epic 'Chronicles' followers of the longsword's masterpiece will run be disappointed. Trail of darkness is probably the best true 12th. Spectrum game (could lead for 100% Spectrum), and features more than a year of development and improvement to the revolutionary 2D 110K/120K resolution.
